¹ QlikView is an in-memory analysis technology; memory requirements for QlikView products are directly related to the quantity of data being analyzed.

² Third-party security requires QlikView Server Enterprise Edition.

³ Android browser support requires anonymous access to be enabled on the QlikView Server (requires session or usage call's – not available on a Small Business Edition QlikView server).
Given the wide variety of Android devices please see QlikCommunity for tested devices and version details.

⁴ Recommended for development and testing purposes only.

⁵ QlikView Publisher, QlikView web parts for Microsoft SharePoint®, and QlikView Workbench are additional licensed modules of QlikView Server. They are installed by applying a license to a QlikView Server. QlikView web parts for Microsoft SharePoint® and QlikView Workbench require QlikView Server Enterprise Edition.

⁶ It is recommended, for optimal performance of a QlikView deployment, that QlikView Server and Publisher reside on separate, dedicated server machines with no other applications running.
